WHAT MAKES UP THE MARINE LITTER ENTERING THE CARIBBEAN SEA?

According to PROMAR Phase II Baseline Reports conducted by our five Partner Countries, plastic made up

49% TO 98%

of shoreline litter based on their selected sites, with each country's results differing.

PROMAR's Baseline Reports identify where this litter comes from.
Same material, different pathways:

Tidal Movement

Informal Dumping

Absence of Bins

Household Waste Leakage

Storm Drains

River Discharge

Each Baseline Report includes actionable recommendations, from infrastructure to policy reform, tailored to what was found. PROMAR is working with each country to put them into action.
